

Howard Fertilizer

Groveland, FL

Howard Fertilizer is a regional company based out of Orlando, FL. We worked on their Groveland plant to bring it up to compliance with city, county and state requirements, which included conversion to central sanitary sewer, addition of a bike trail across the SR50 frontage and upgrades to the storm water management system. Additional work included planning for building expansions and the site truck traffic circulation, which was

very complicated and included many points of truck docking and multiple points of product delivery and pickup.
